

New RDF plant order in Germany

Austrian Energy & Environment AG & Co KG wins circulating fluidised bed plant in Glückstadt

AE&E Austria received a contract from Heizkraftwerk Glückstadt GmbH for the engineering, supply, installation and start-up of a 95 MW_{th} POWERFLUID[®] RDF-incineration plant with downstream Turbosorp[®] dry flue gas cleaning system.

Through the co-operation between its Business Units Energy and Environment, AE&E Austria demonstrates its competitive strength as a supplier of complete processing lines.

This order is a further important reference in the RDF field in Germany and proves the customer's trust in our technologies. AE&E has already installed a boiler plant of identical design in Neumünster. In Glückstadt RDF, paper fibre sludge, coal and light fuel oil are to be used as fuels.

The plant is scheduled to go into operation in spring 2010.
