

## **Takeover of the Swiss company KRB Kessel- und Rohrleitungsbau by Von Roll Umwelttechnik AG**

In the course of the expansion of its services range in the field of waste incineration plants, on January 1, 2008, Von Roll Umwelttechnik AG took over KRB AG, Kessel- und Rohrleitungsbau.

The purchase of KRB constitutes both an extension to strategically important service activities and an excellent technological addition to the existing range of the Von Roll Inova-Group.

KRB is located in Buchs near St. Gallen in the canton of Aargau/Switzerland and specialises in the production and installation of pressure parts for steam generators. It possesses great expertise in the claddings segment (welding to order with high-alloy steels for surface protection) and disposes over well-equipped production facilities.

With its special know-how, KRB AG represents an optimum supplement to the network of AE&E production plants in France, Croatia, Spain, India and China.
