

Von Roll Inova leverages strong position in Norway

Major waste treatment plant order received from Bergen

In early July, Von Roll Inova was awarded a contract to extend the waste treatment plant in Bergen, Norway. This project continues a series of successful VRI ventures in Norway. In the past ten years, Von Roll Inova won all master contracts awarded for large-scale plants in this important North European market.

The new plant has a capacity of 120,000 t/year. It provides an environmentally sound management concept for all domestic and commercial waste that originates in Norway's second-largest city. Von Roll Inova was chosen as the general contractor to deliver the entire plant without the construction lot. The key factors that resulted in this award were VRI's competence and experience in the completion of turnkey facilities as well as the company's long-standing relationship with the customer, BIR Avfallsbehandling AS, Bergen.

When it is completed in late 2009, the new facility will generate 38 MW of energy that will be available as electricity and district heat.
