

## **AE&E Inova wins major order in Germany as general contractor**

### **Mannheim**

The modern waste incineration boiler in Mannheim will replace two former boilers. The new installation has been approved by the Karlsruhe city presidium and AE&E Inova GmbH has been appointed as the general contractor. Following Leuna 2, this is the second contract that AE&E Inova is to complete for MVV as the general contractor.

The new boiler has a capacity of 210,000 t/y. In the future three refuse-fired boilers will treat a total annual capacity of approximately 560,000 t of waste at the new plant.

All in all, AE&E Inova's contract contains the following:

- The firing and the boiler
- The electric filter
- The construction engineering
- The energy technology
- The electrical and control technology

AE&E Inova GmbH is to complete the order with its consortium partners from August 13, 2007 onwards. The total order volume is in excess of EUR 100 million.

For AE&E Inova GmbH this is an important reference as a general contractor for the securing of complete plant competence.
